GoodwinThis book is an essential resource for anyone responsible for any aspect of health care credentialing. It is well-researched and briming with case studies, references, sample forms, and how-to guidance. Not only would it serve as a great primer for someone new to the profession, but it also includes a discussion of why current credentialing practices are somewhat outmoded, and suggests innovations that are right-on and would be of interest to any seasoned credentialing professional. In addition to the innovations presented, this guide book also provides examples of successful change and a road map to follow. In the US, we spend more on healthcare than in other countries and get less in terms of quality of care (as recently reported by The Commonwealth Fund). Core to provision of quality of care are the systems to ensure that providers of healthcare are appropriately educated, trained, qualified, and have current competencies, and are able to show performance trends that are at or better than expected levels. Excellence in credentialing is essential to achievement of quality of care and patient safety. This publication sets a new benchmark for level of excellence in this area.
