This was published in 2004. Several major changes since then make some of the patent chapters severely dated. The statutory supplement helps, but even that was published in 2010, before the America Invents Act.0 of 0 people found the following review helpful. This casebook applies the principles of intellectual property protection to fact patterns arising in a variety of industries, including music, art, computers, biotechnology, and industrial design. The text takes a comparative approach to intellectual property that emphasizes the commonalities and differences in the theories underlying the regimes of

trademark, copyright, and patent law. State law is integrated into the discussion, comparing laws and raising issues of pre-emption as they naturally occur in cases. A comprehensive teacher's manual provides answers to the problems, discusses each case in detail, and includes background materials, hypotheticals, and suggested readings.
