Horrible BookBy Boiler10This is an absolutely horrendous book, if you want to learn anything about International IP DO NOT buy this book0 of 3 people found the following review helpful. DisappointmentBy I. LavdanskaI paid for the Second Edition, and received first. The price was almost the same as for the new book and such a disappointment...

This clearly written casebook discusses public international intellectual property law (the obligations regarding intellectual property protection undertaken and imposed on states) found in treaties and similar instruments. It includes

extracts from many of the classic exegeses on the topic combined with a wealth of up-to-date sources and aims to be a teaching and learning vehicle that enables students to engage fully with the topic. The Second Edition covers the international intellectual property architecture, the development of the public international law of intellectual property, private international law (conflicts), and enforcement of rights. In addition, the book provides detailed coverage of international copyright and industrial property law and it analyzes the processes by which international norms are domesticated (or resisted). Extensive notes, questions, and fact patterns explore the materials in more detail and tease out many of the fascinating policy questions and concerns that this topic provokes. Given its scope, this book also serves as an invaluable desk-top reference for further research and analysis. The Second Edition of *International Intellectual Property Law and Policy* builds upon the success of the First Edition, which has been a market leader in this field since its publication in 2001. Much of the book has undergone substantial revision and has benefited from very constructive feedback received from professors and students. The Second Edition includes coverage of regimes regulating human health and access to medicine, environmental protection and access to genetic resources, digital communications and access to information, and human rights. It also includes expanded coverage of the intellectual property standards increasingly common in regional and bilateral free trade agreements.
