John W. Head : International Law and Agroecological Husbandry: Building legal foundations for a new agriculture (Earthscan Food and Agriculture) before purchasing it in order to gage whether or not it would be worth my time, and all praised International Law and Agroecological Husbandry: Building legal foundations for a new agriculture (Earthscan Food and Agriculture):

0 of 0 people found the following review helpful. but there are several parts of the book devoted to philosophy that anyone can enjoy. By CustomerA must read for anyone in the agricultural industry. John Head has presented a succinct and compelling argument for why modern agriculture simply cannot continue for economic, social, environmental, and legal reasons. The writing can be overly academic for the average reader, but there are several parts of the book devoted to philosophy that anyone can enjoy.

Remarkable advances are being made in life science and agricultural research to reform the methods of food production, particularly with regard to staple grain and legume crops, in ways that will better reflect ecological realities. However, advances in science may be insufficient to ensure that these possibilities for agricultural reform are realized in practice and in a sustainable way. This book shows how these can only be achieved through changes in legal norms and institutions at the global level. Interdisciplinary in character, the book draws from a range of issues involving agricultural innovation, international legal history and principles, treaty commitments, global institutions, and environmental challenges, such as climate change, to propose broad legal changes for transforming global agriculture. It first shows how modern extractive agriculture is unsustainable on economic, environmental, and social grounds. It then examines the potential for natural-systems agriculture (especially perennial-polyculture systems) for overcoming the deficiencies of modern extractive agriculture, especially to offset climate change. Finally it analyses closely the legal innovations that can be adopted at national and international levels to facilitate a transition from modern extractive agriculture to a system based more on ecological principles. In particular the author argues for the creation of a Global Convention on Agroecology.

About the Author John W. Head is Wagstaff Distinguished Professor of Law at the University of Kansas School of Law, Lawrence, Kansas, USA. He is the author of several books on international law.
