Jeffrey Miller, Ann Powers, Nancy Elder : Introduction to Environmental Law: Cases and Materials On Water Pollution Control (Environmental Law Institute) before purchasing it in order to gage whether or not it would be worth my time, and all praised Introduction to Environmental Law: Cases and Materials On Water Pollution Control (Environmental Law Institute):

The study of water pollution control regulation is a study of statutes and their administration. This casebook explores

water pollution and the federal statute chiefly designed to control it, the Clean Water Act, and examines how water pollution is addressed, first by the common law and then by statute. An introduction provides the student with an understanding of what constitutes water pollution, where it originates, and how it can be controlled.

"This is a wonderful resource. From its organization to selection of cases and materials and the questions and comments, this book reveals the complex regulatory scheme and the very developed area of environmental law. If a school could have only one in-depth environmental course the water law course would be the one to choose, particularly in light of the in-depth information and analysis provided here."
