**Lars Noah, Barbara A. Noah : Law, Medicine, and Medical Technology: Cases and Materials (University Casebook Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Law, Medicine, and Medical Technology: Cases and Materials (University Casebook Series):

2 of 2 people found the following review helpful. An Interesting but Dense Read By Mary Cahalan As a health law certificate student in law school, this book brings to light many of the FDA approval and regulatory issues that face drugs, devices and medical technologies. It provides an up to date case overview and has a useful appendix of bills and regulations on the subject.

This law school casebook focuses on the regulation of medical technology. Encompasses not just legislative and administrative agency controls on the creation and use of such technology, but also less direct controls mediated through the systems of tort law, insurance, and intellectual property regimes, among others. This work is organized thematically rather than sequentially in reference to a product's life-cycle, and consider the many ways in which society attempts to manage the production and application of medical technologies, tracing the research and development process from laboratory to use in the treatment of patients.
