Susan L. Crockin JD, Howard W. Jones Jr. MD : Legal Conceptions: The Evolving Law and Policy of Assisted Reproductive Technologies before purchasing it in order to gauge whether or not it would be worth my time, and all praised Legal Conceptions: The Evolving Law and Policy of Assisted Reproductive Technologies:

2 of 2 people found the following review helpful. Great textbook and book! By kbergi01I had professor Crockin for a course at Tufts University this semester and we read a copy of this book before it was published. It was very easy to

understand and was very helpful for students like me, who are not law students but science students. It's a great way to learn how ARTs have developed and what paths have been chosen through cases thus far. Professor Crockin discusses specific cases with summaries of each at the end of the chapters, making a great reference for looking up complete cases relevant to what you are researching. The sections written by Dr. Jones are very clear and informative and supplement the legal side of the book very well. I highly recommend this book! It's the first of its kind.

Written by a medical and a legal pioneer in the field, this book comprehensively reviews and analyzes the evolving law and policy issues surrounding assisted reproductive technologies. Dr. Howard W. Jones, Jr., founder of the first in vitro fertilization program in the United States, offers medical commentary, while attorney Susan L. Crockin, author of the column "Legally Speaking" in ASRM News (the newsletter of the American Society for Reproductive Medicine), provides legal analysis. The book opens with a legal primer and timelines sketching the medical and legal milestones in the history of reproductive technology and law. Each chapter provides a case-by-case discussion of the relevant law, as well as cogent medical and legal commentary and analysis on a particular substantive area. Chapter topics deal with a vast array of issues, including artificial insemination, sperm and egg donation, traditional and gestational surrogacy, posthumous reproduction, same-sex parentage, genetics, cryopreservation and embryo litigation, discrimination and access to reproductive care, professional liability, stem cell research, and abortion. In discussing the medical and legal issues surrounding these topics, Crockin and Jones reveal what has gone right and what at times has gone terribly wrong for both the families and the professionals involved. They make clear that technological advancements have far outpaced the laws and policies in place to protect all who use them. This book makes a timely contribution to current debates over the legal and policy issues raised by the highly publicized birth of octuplets in California and the embryo legislation activity taking place in many states. It offers information and insight to policymakers, medical and legal professionals, patients and other participants, and everyone else interested in the history and future direction of the field.

"The book is encyclopedic in its review of events that have shaped ART over the past three decades. No other publication has undertaken to compile such a review of relevant events, cases, law, and policies." (Judith F. Daar, author of *Reproductive Technologies and the Law*) "In a field crowded with hyperbole and fear, *Legal Conceptions* provides a haven for anyone seeking thoughtful analysis and wise counsel. The authors, both experts in the field of assisted reproduction since its earliest days, show how expanding technologies have created ethical problems and how the law can begin to resolve them." (Debra Spar, President, Barnard College) "Although, the focus is on law, the writing is clear and accessible, and background information is supplied for nonlawyers." (JAMA) "Fascinating." (Lawrence D. Hultgren *Metapsychology*) About the Author Susan L. Crockin, J.D., is the principal of the Crockin Law Policy Group, LLC, in Newton, Massachusetts, is an adjunct professor at Eastern Virginia Medical School, and teaches at Tufts University. She has edited two books on the legal issues of ARTs and writes the column "Legally Speaking," published in ASRM News. Howard W. Jones, Jr., M.D., is a world-renowned fertility doctor who, together with his late wife, Dr. Georgeanna Jones, pioneered IVF technology in the United States. He initiated and chaired the first Ethics Committee of the American Fertility Society (now ASRM) and is former director of the Jones Institute for Reproductive Medicine and a professor emeritus at Eastern Virginia Medical School.
