Patent bar exam resources tend to be either very expensive and up-to-date or inexpensive and out-of-date. I think if you're looking to buy a single exam resource for less than \$100 this is your best bet. First, old exams are only available through 2003 and any new exam questions since then are only available online through vague second-hand accounts of new material tested. But Longacre prepares you for this new material by including many questions modeled after the new post-2003 questions and material that people have reported being tested on. Second, the 2010 edition is sufficiently up-to-date to still be useful despite the recent changes to patent law. Not all of those changes have been added to the exam yet, and all of the answers in this book were still right when I compared them to the currently tested version of the MPEP. The only way this book could be improved is if the answer explanations were more comprehensive like those for the official old

exams. The old exams available online have detailed explanations for why each answer choice is right or wrong and include detailed citations and quotes that you can look up. The Longacre answer explanations 1) generally have a broad cite to an overall MPEP section, making you hunt for the specific material within that section that explains the answer, and 2) often just explain the right answer without addressing some or all of the wrong answer choices. In short, this book made it possible to prepare for the exam without paying hundreds more for a review course. 1 of 2 people found the following review helpful.
